

# Backup 1000s of Sites from One Dashboard

Schedule and manage Akeeba Backup across thousands of Joomla and WordPress sites from a single mySites.guru dashboard.

Phil E. Taylor | 25 March 2026

With [mySites.guru](#) you can set and forget your backup schedule and let it handle running your backups and notifying you if there's a problem.

## What makes a backup worth having?

There is only one kind of backup worth having: one that actually restores.

mySites.guru uses Akeeba Backup under the hood, the best backup solution available for Joomla and WordPress, inside a centralised dashboard.

Akeeba has been around since 2006. Millions of downloads, high praise in the Joomla Extensions Directory, three J.O.S.C.A.R. awards. One goal: backup, restore and transfer your site in a snap. It supports WordPress too.

## How does the mySites.guru backup scheduler work?

Scheduling backups across many sites has always been the annoying part of managing Akeeba. mySites.guru handles that as a centralised scheduler for all your connected sites.

If you have thousands of Joomla and WordPress sites in your dashboard, managing their Akeeba connections from one place just makes sense.

**Recent Backups, Schedules and Backup Plugin Connection Status** Start Backup of All Sites

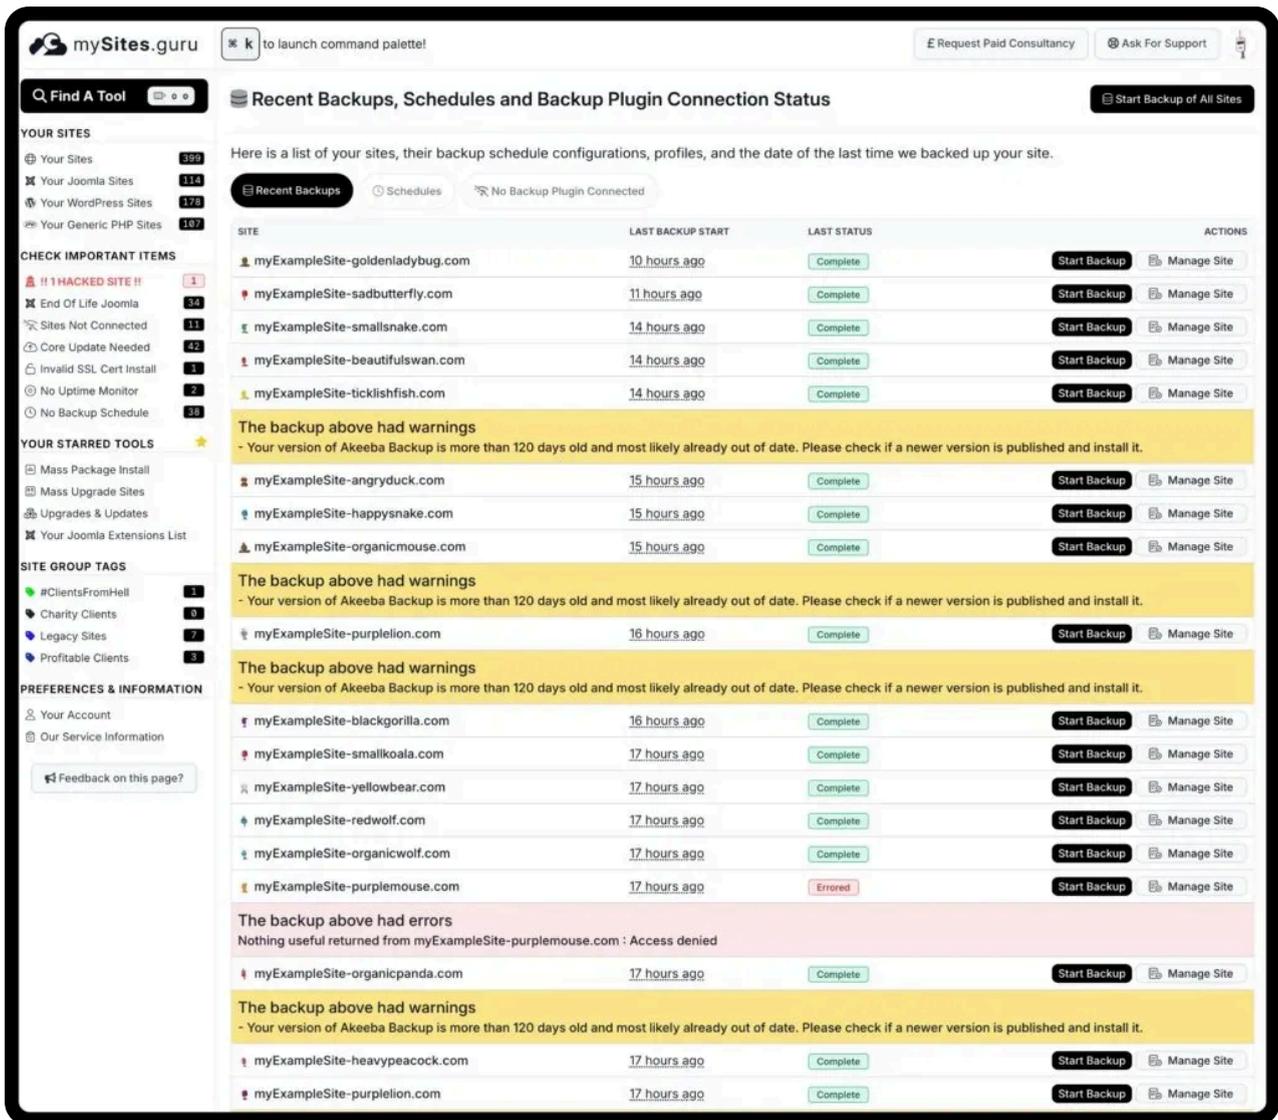

Here is a list of your sites, their backup schedule configurations, profiles, and the date of the last time we backed up your site.

Recent Backups | **Schedules** | No Backup Plugin Connected

SITE	SCHEDULES ENABLED	BACKUP SCHEDULES	ACTIONS
myExampleSite-organicswan.com	1 Schedule Enabled	At 05:30 AM	Start Backup   Manage Site
myExampleSite-silvergoose.com	1 Schedule Enabled	At 11:00 AM	Start Backup   Manage Site
myExampleSite-biglion.com	1 Schedule Enabled	At 03:16 AM	Start Backup   Manage Site
myExampleSite-greenzebra.com	1 Schedule Enabled	At 03:16 AM	Start Backup   Manage Site
myExampleSite-brownfrog.com	No Schedules Enabled	No Backup Schedules	Start Backup   Manage Site
myExampleSite-blacksnake.com	1 Schedule Enabled	At 02:53 PM, only on Tuesday	Start Backup   Manage Site

myExampleSite-angryzebra.com	1 Schedule Enabled	At 12:34 PM, only on Tuesday	Start Backup   Manage Site

Connecting Akeeba to mySites.guru takes a single click. From there, pick the backup profile to run and set a schedule: daily, weekly, or monthly.

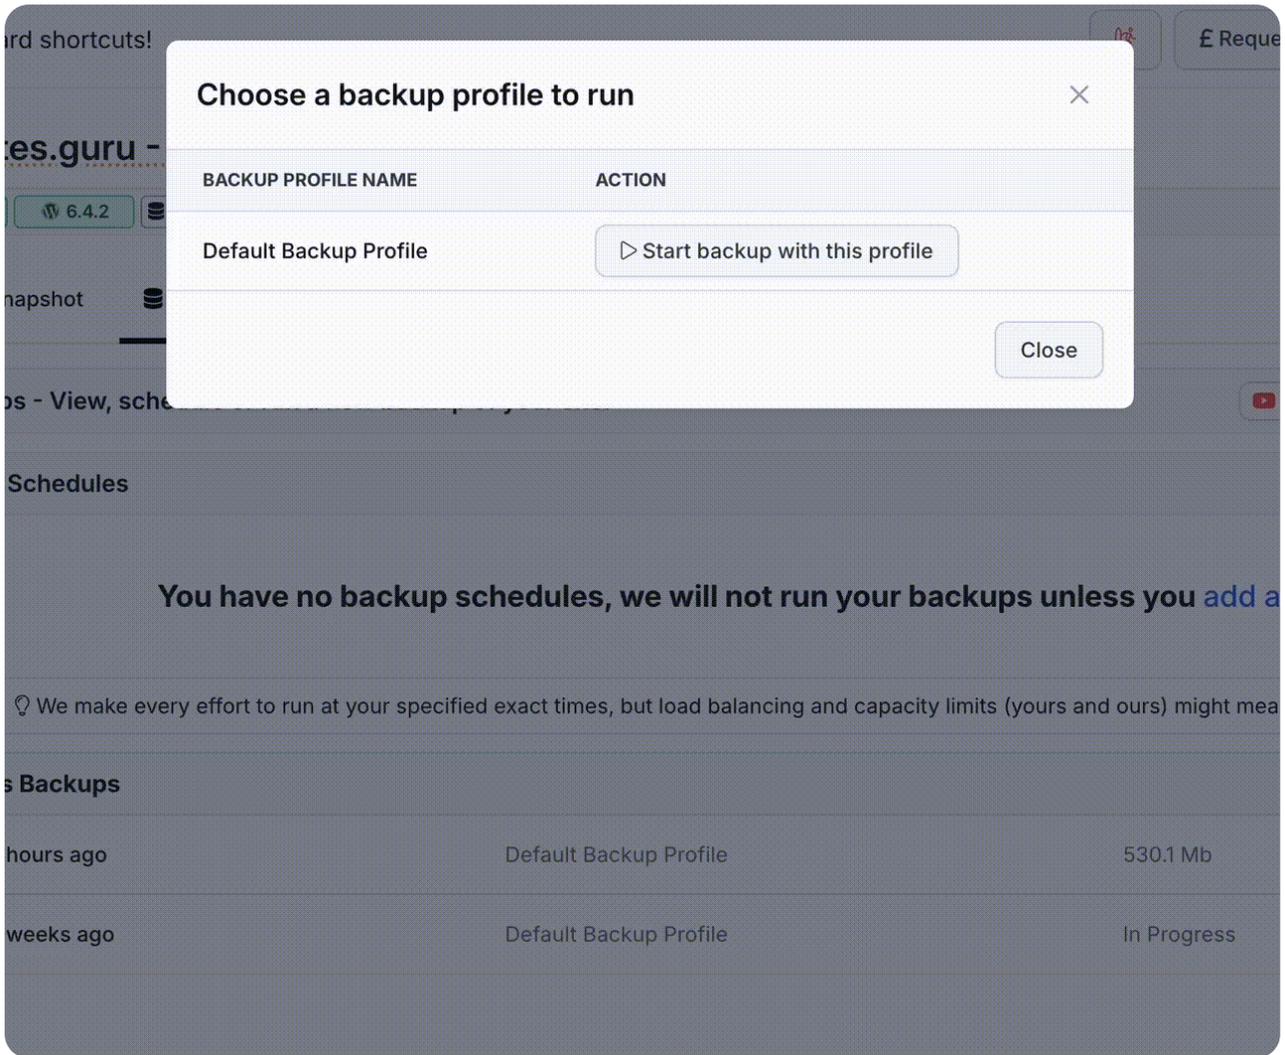

The backup overview dashboard shows each site's last backup date and status at a glance.

You can disable schedules, adjust them, or start backups across all your sites with one click.

## How do you backup 1000 sites with one click?

mySites.guru queues all the sites and processes the backups as fast as your servers can handle.

## Where are your backups stored?

Wherever you tell Akeeba to store them.

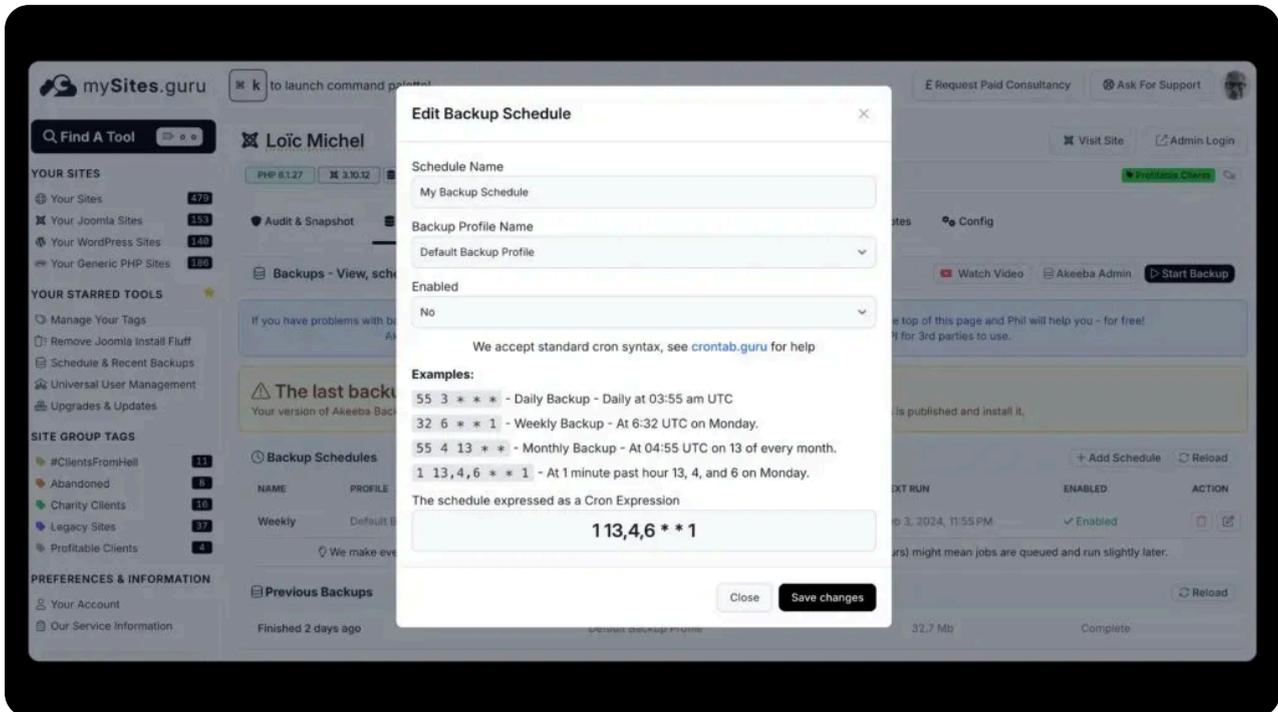

With Akeeba Backup profiles, you set the destination: Amazon S3, Dropbox, Azure, BackBlaze, Box.com, Rackspace, FTP, or your own server (though we don't recommend keeping them only on the server).

## Are backups stored in mySites.guru?

No. Never. mySites.guru triggers and monitors your backups, but the files themselves live wherever you tell Akeeba to put them.

## How do backup notifications work?

The scheduler notifies you based on your preferences: when a backup starts, when it finishes, and always when something goes wrong.

## WordPress users: All-In-One Migration Plugin support

WordPress users aren't limited to Akeeba. You can also use the All-In-One Migration Plugin for your backups. The same scheduling interface and features are available in mySites.guru for that plugin too.

For guidance on fitting backups into a broader update and maintenance workflow, see the [managing CMS updates at scale guide](\"#\").

# Frequently Asked Questions

## **Which backup plugin does mySites.guru integrate with?**

mySites.guru integrates with Akeeba Backup (for both Joomla and WordPress), as well as the All-In-One Migration Plugin for WordPress users.

## **Where are backups stored when using mySites.guru?**

Backups are stored wherever you configure Akeeba to store them - options include Amazon S3, Dropbox, Azure, BackBlaze, FTP, and more. They are never stored within mySites.guru itself.

## **Can I back up all my sites at once with mySites.guru?**

Yes, mySites.guru lets you trigger backups for all your connected sites with a single click, queuing and processing them as fast as your servers allow.

## **Does mySites.guru support WordPress backups?**

Yes. WordPress users can use either Akeeba Backup for WordPress or the All-In-One Migration Plugin, both fully supported through the mySites.guru scheduler.
