Backup All Your Sites With One Click

The one-click Backup All Sites button is back in mySites.guru, now with a per-site default backup profile to power the bulk backup queue.

Phil E. Taylor | 28 August 2026

Ok, I screwed up. I admit it and Im sorry. We recently introduced Unlimited Backup Schedules per site and in doing so introduced a logic bug that caused us to remove the “Backup All Sites” in one go feature.

Lets talk about that - tl;dr; **The Backup All Sites button has returned!!!** :-)

One of the things we do well is respond fast - to emerging hack threats, security incidents, and requests from customers. We can deploy new features the same day, sometimes multiple times a day, with zero downtime.

This is one of those times.

What caused the problem?

On implementing Unlimited Backup Schedules per site, we introduced a logic bug. This is caused because before that change, we stored a single Backup Profile per site.

This meant that when you clicked the “Backup all sites” we knew which of the unlimited backup profiles to run on each site.

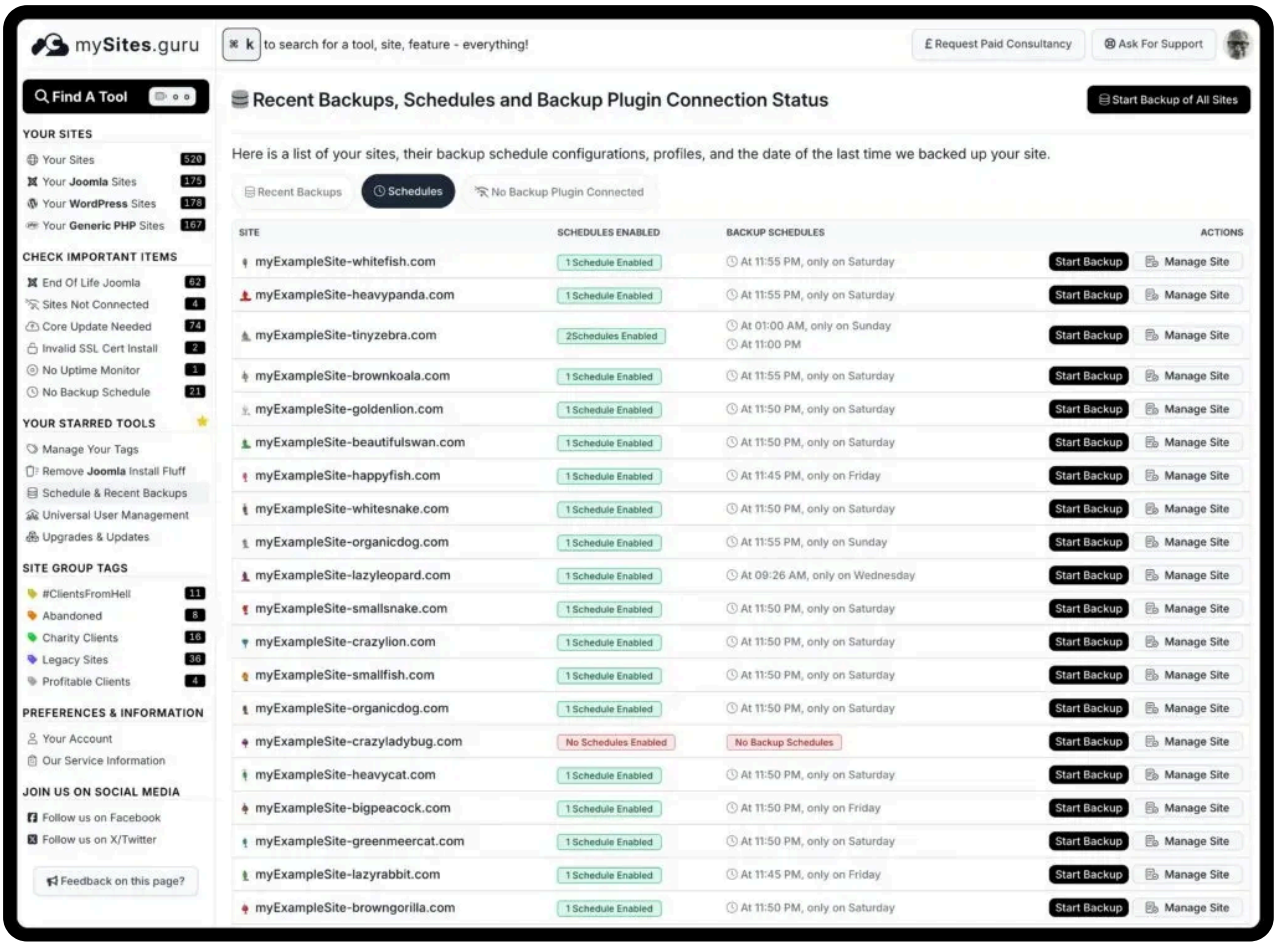
When we introduced multiple schedules, you were then able to select a different backup profile per schedule, we no longer had a default profile per site, only a profile per schedule.

This meant that we could not provide a “backup all sites” feature, as we did not know which profile to run for each site!

What was the solution?

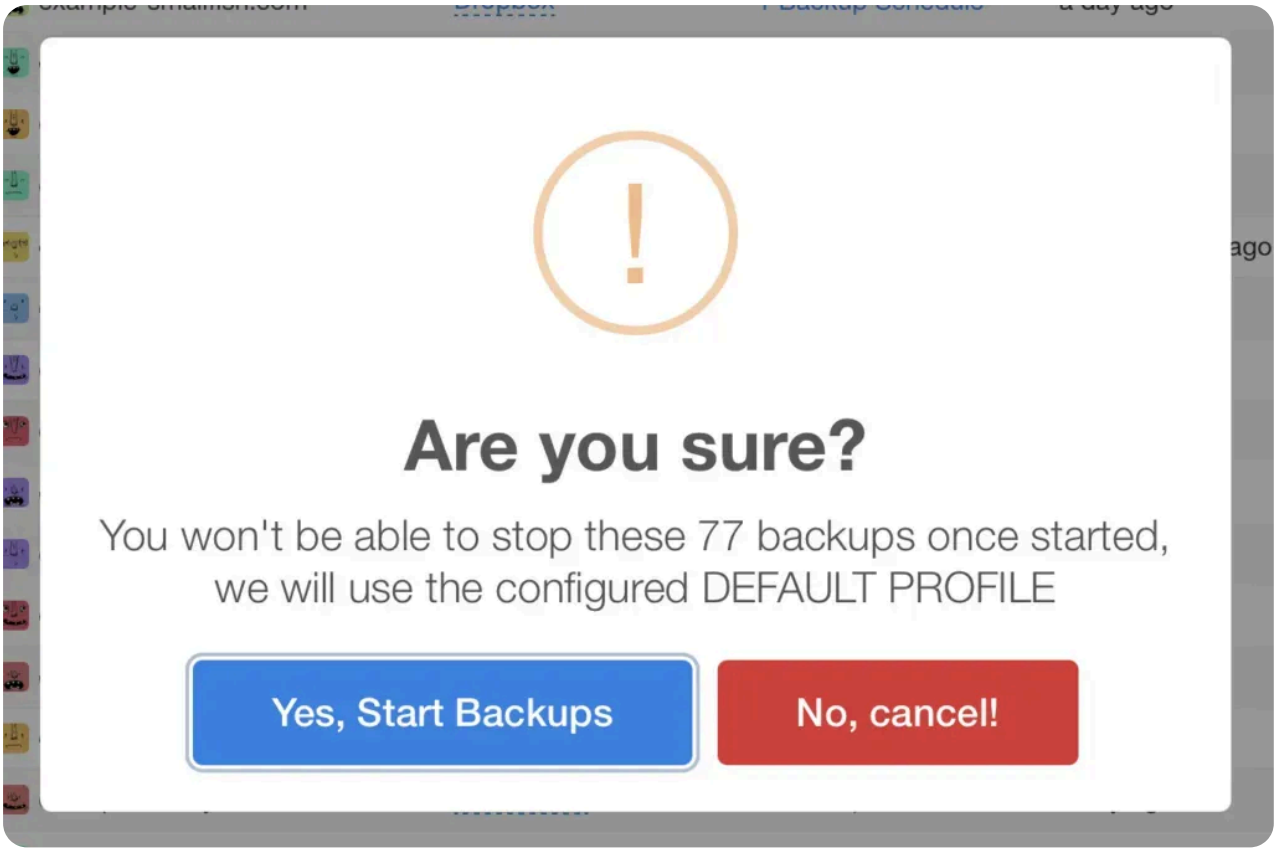
The solution was pretty simple really, we reverted some code to allow us to re-implement the “Backup All” button on the Schedules tab of the “Scheduled Backups” page

We then added new features to allow you to select a default backup profile per site. You can do this on the schedules page, or on the Settings Tab of Manage Site page.



You can still filter your sites before pressing the new **“Start Backup Of All Sites Visible Below”** button.

Once you click the button you get a chance to back out ;-)



one click of that blue button and we usher your request into our backup queue and process the backups as fast as we can - we will redirect you to see a list of your running backups where you can sit and watch them, or you can close your browser/browser elsewhere because the backups will continue regardless of your actions.

Thanks to all those that told us how valuable this feature was, and tested the new implementation. We ❤️ you!

Frequently Asked Questions

Can I back up all my connected sites at once in mySites.guru?

Yes - the 'Backup All Sites' button is available on the Scheduled Backups page and queues backups for every visible site in one click, continuing in the background even if you close your browser.

Do I need to stay logged in while the bulk backup runs?

No - once you trigger the backup queue, the backups continue processing on the server regardless of whether you keep your browser open.

How does mySites.guru know which backup profile to use for each site during a bulk backup?

You set a default backup profile per site on the Schedules page or the Settings tab of the Manage Site page, and the bulk backup uses that default profile for each site.
