

Manage Multiple Sites With Your Whole Team

Add unlimited team members to your mySites.guru account with per-site and per-feature permissions. No per-seat fees.

Phil E. Taylor | 12 March 2026

If you run an agency, you've probably been through the dance of sharing logins over Slack or forwarding alert emails to the right person. We added team accounts to mySites.guru so you can stop doing that. If you're still getting your head around the core workflow, start with the guide to [managing multiple WordPress sites](#) - team access is the natural next step once the basics are in place.

Everyone on your team gets their own login. You pick which sites they can see and which tools they can use - backups only, monitoring only, full access, whatever makes sense. Want to give a client read-only access to just their own site? That works too. For client-facing sites, you can also [remove the WordPress logo from the admin bar](#) and send [white-label reports](#) so everything looks professionally branded.

Your Team Members

Add team members

Invite colleagues to help manage your sites. Team members get full access to all features except billing, subscriptions, and team management.

You are responsible for your team members' actions. Team member access requires an active subscription.

[Add a team member](#)

Current team members:

-  **Dev Notifications**
mysites@example.com 
-  **Support**
support@example.com 
-  **Dave M**
davem@clientA.com 

How do you set it up?

Go to your [Account page](#), open the [Your Team tab](#), and click **Add Team Member**. Assign them sites and pick their permissions. They'll get their own login and can start working right away.

How do notifications work?

Team members get all notifications by default. They can tweak their own [notification preferences](#) without affecting yours. Changes anyone makes to site config or monitors apply to the site, not the user, so everyone sees the same thing.

How do passkeys and security work?

Every team account supports [passkeys](#) - Face ID, Touch ID, Windows Hello, whatever your device offers. No codes to type, no authenticator app to fumble with, and nothing that can be phished. Your team logs in with a fingerprint or a glance and they're in.

Passkeys replace the weakest link in account security (passwords people reuse everywhere) with cryptographic keys tied to their device. If someone on your team is still using `password123` for everything, passkeys fix that problem permanently.

Two Factor Authentication is also available for teams that want a more traditional setup. You can send password resets, disable accounts, or remove someone whenever you need to.

There are no per-seat fees. Team access is part of every plan - add as many people as you need.

[Add Your First Team Member Now](#)

Team collaboration is a key topic in our [guide to multi-site management](#).

Frequently Asked Questions

How many team members can I add to my mySites.guru account?

You can add unlimited team members, each with their own login, permissions, and notification settings.

Can I restrict what a team member is allowed to do?

Yes - you can limit a team member's access to specific sites and specific features, such as backups only or monitoring only.

How is team member access secured?

Every team account has its own username and password, with support for passkeys (Face ID, Touch ID, Windows Hello) and Two Factor Authentication. Passkeys are phishing-proof - there's no password to steal.
