

The mySites.guru Command Palette Navigation

Press Cmd+K anywhere in mySites.guru to open the command palette and instantly navigate to any site, tool or account setting without touching the mouse.

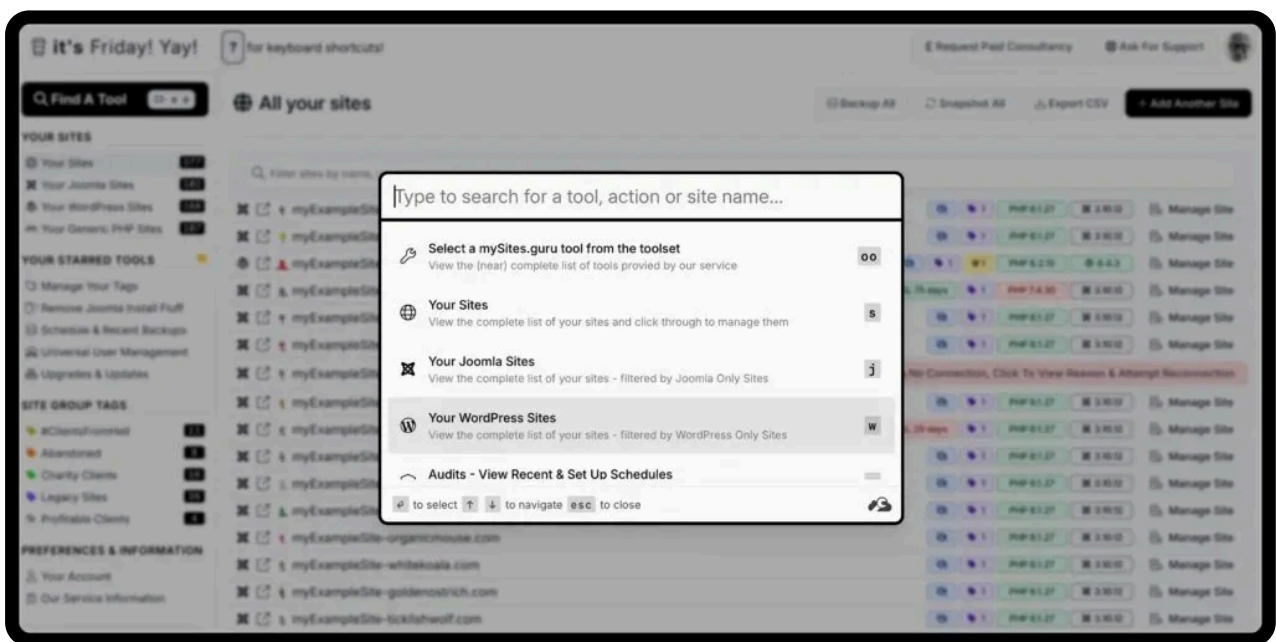

Phil E. Taylor | 16 March 2026

A command palette is one of the fastest ways to navigate a large application. Press Cmd+K (or Ctrl+K on Windows) anywhere in mySites.guru to open it and navigate the whole service with a few keystrokes.

The command palette in your [manage.mySites.guru](#) account includes all menu options and account functions - changing your password, viewing your invoices, everything.

All your sites are included too. If you have 100 sites you can jump straight to any site's manage page from anywhere: press Cmd+K, type a few characters of the site name or domain, hit Enter.

You can also access most of the [toolset](#) from the command palette. The point is you don't need to click through the tool finder or remember where things live - just search for what you need.

The mySites.guru command palette that can be invoked with cmdk

Are command palettes a new thing?

Some of the other advantages command palettes bring when done correctly:

- You don't have to take your hands off the keyboard. No clicking into menus, remembering where a feature lives. Just cmd+k and type.
- You don't need to know if functionality exists - type what you want and find out if it does and where it is.
- Design trends and long-lived software mean that the UI can change. With a command palette, you don't need to know where functionality has moved - you just search for it.
- You can hide functionality from the UI, avoiding cluttering the screen, overwhelming folks with options, or confusing them with multiple sub-menus.
- They can be implemented to help users with disabilities by providing keyboard shortcuts or screen reader support.

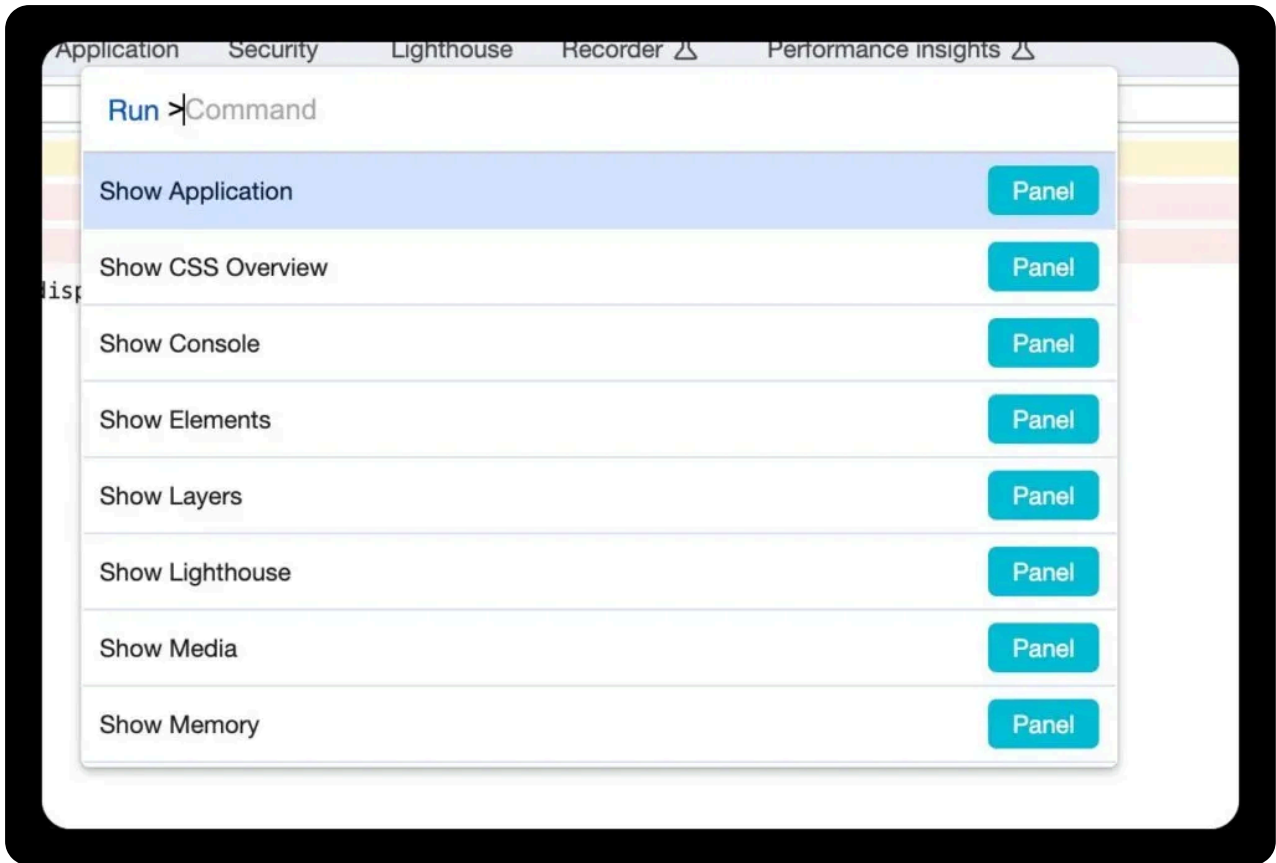

You can read more about the past, present and future over at

<https://www.commandbar.com/blog/command-palette-past-present-and-future/>

although we still don't believe that AI is worth the hype and will never replace much of what it's hyped to replace - command palettes bring quick and easy navigation to large applications.

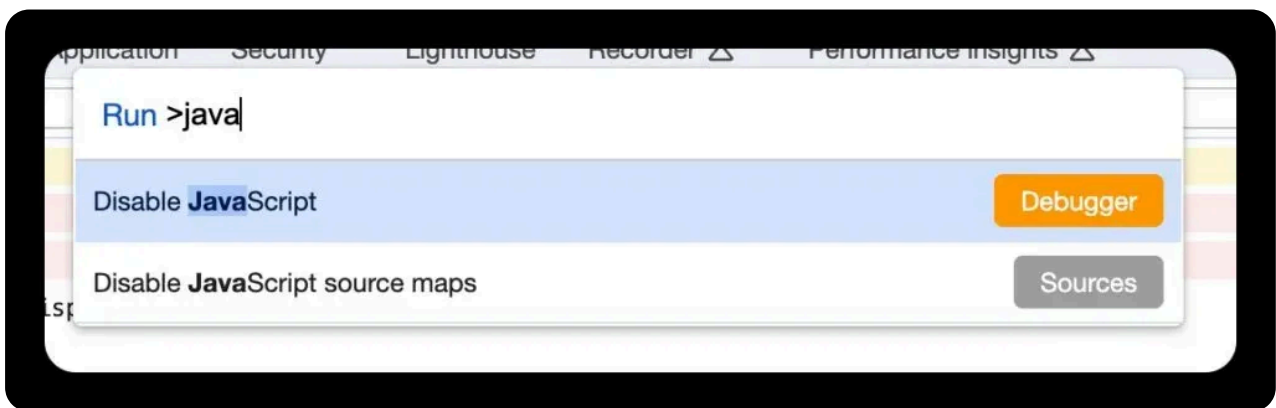

Does Google Chrome have a command palette?

If you are using Google Chrome, then you already have an app that has a command palette built in! The console has a command palette that allows easy access to all features - to invoke that open your Inspector (console), focus it, and press cmd p (or ctrl p on windows) to open a resource or SHIFT CMD P to open the full command palette to run commands.:

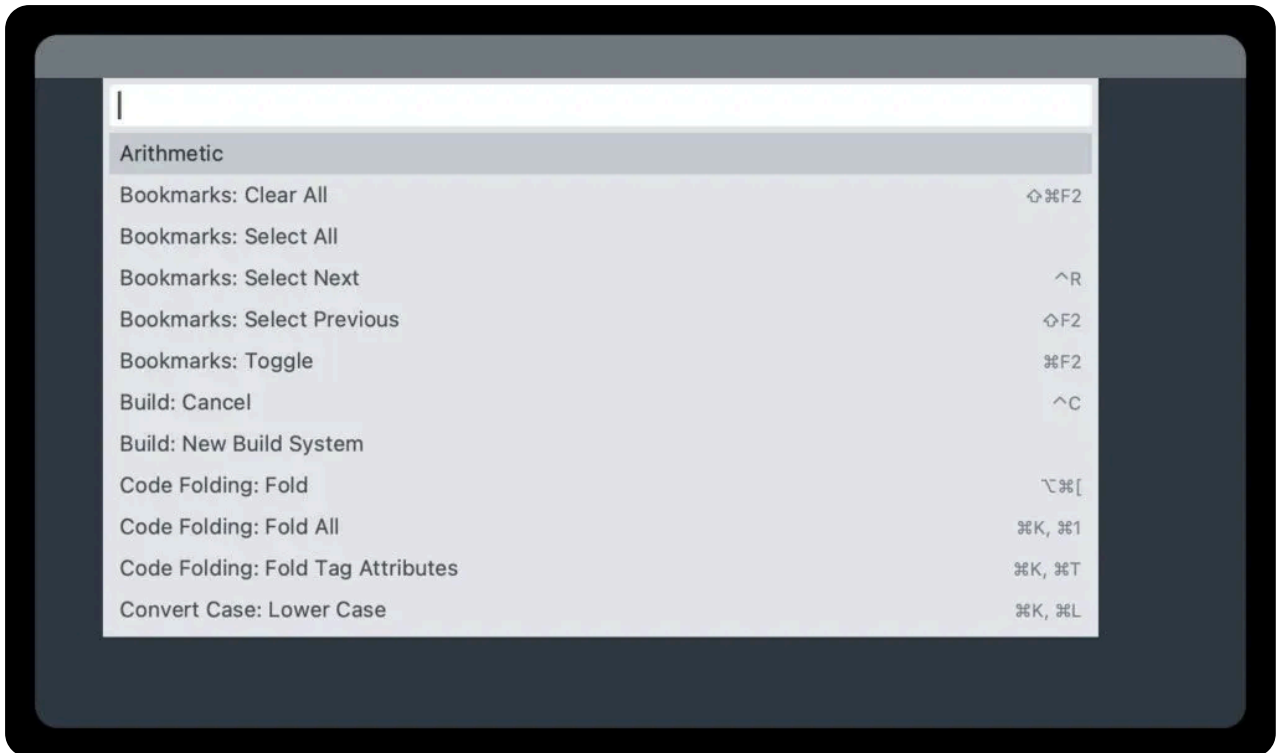

The Google Chrome Command Palette

I use it mainly to disable Javascript for testing -

Cmd P (ctrl P on windows) is a common keystroke for command palettes for obvious reasons.

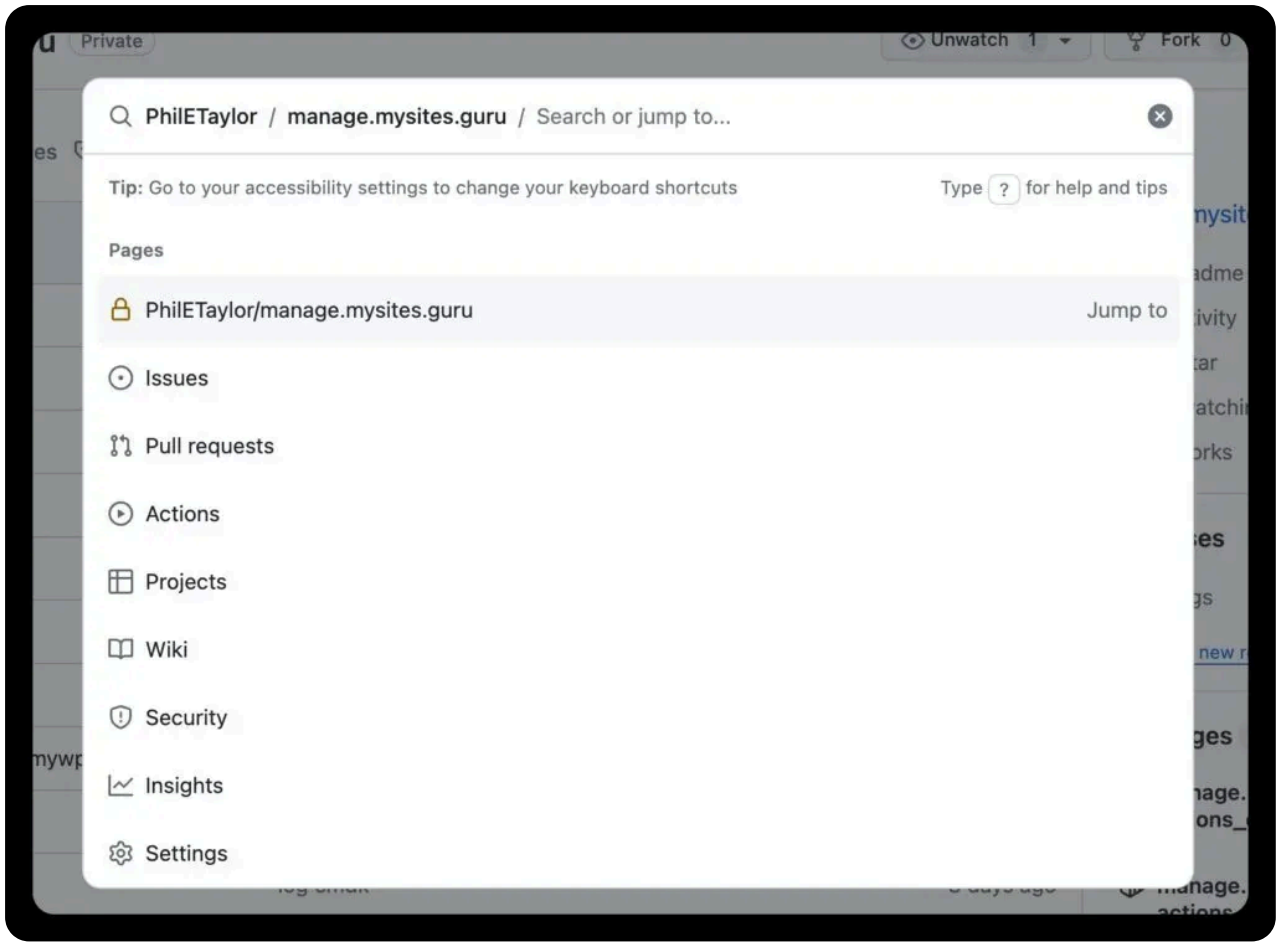

SublimeText also has a command Palette -

The Sublime Text command palette

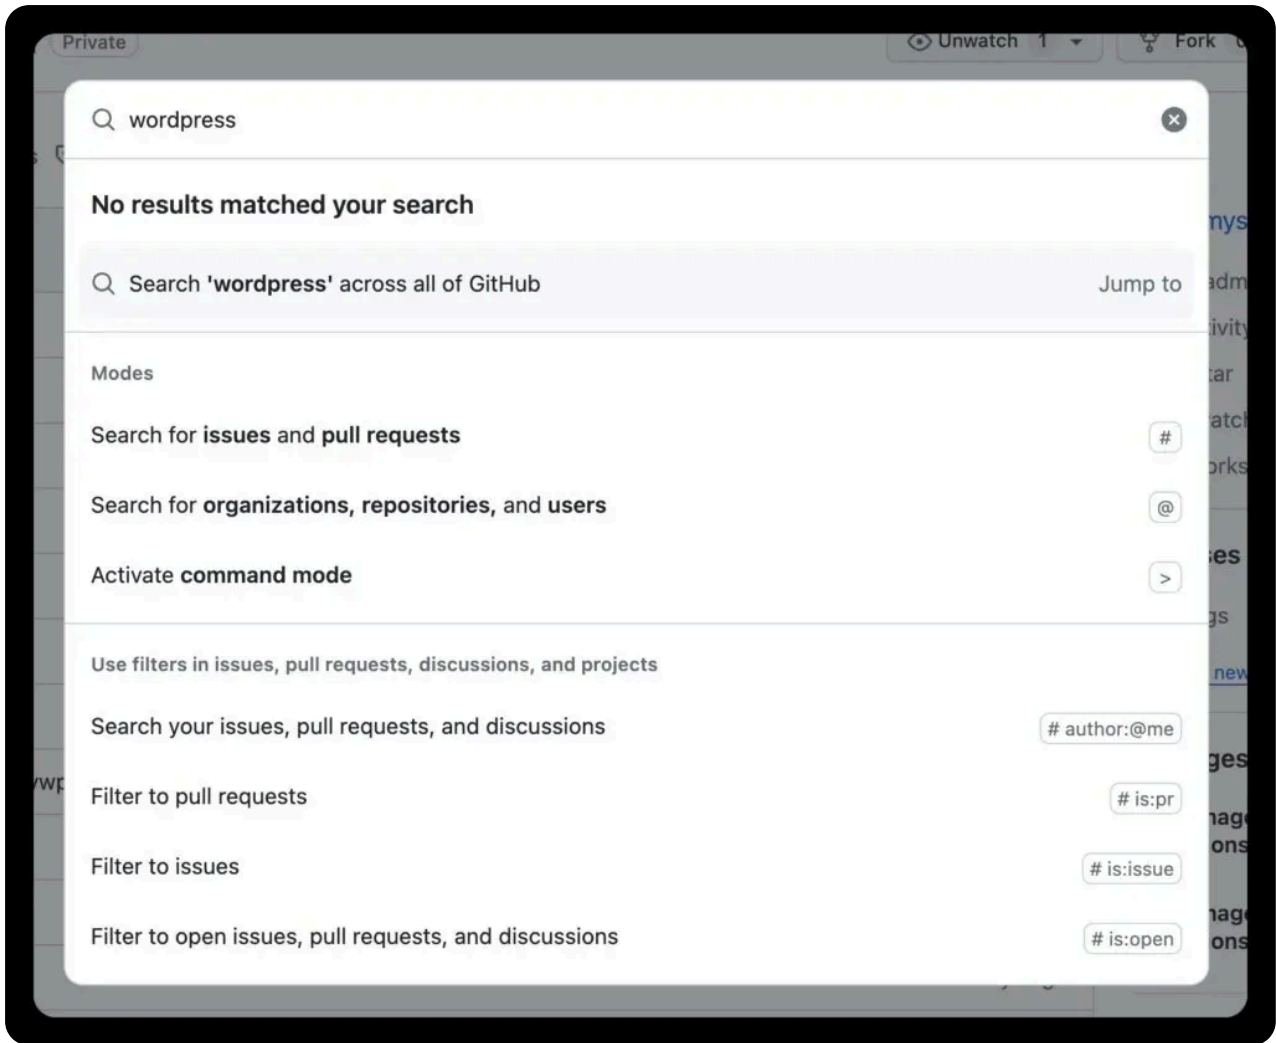

What is the best command palette in existence?

Yes its true, the best command palette we use daily is the one from GitHub which is invoked on any github.com repo with `Cmd k / ctrl k`

The GitHub command palette

from this interface you can navigate pretty much anything in your repository - or even press the delete button to break out of the current context and load different contexts or search across the whole of GitHub - it really is the best ever command palette integration we have ever seen!

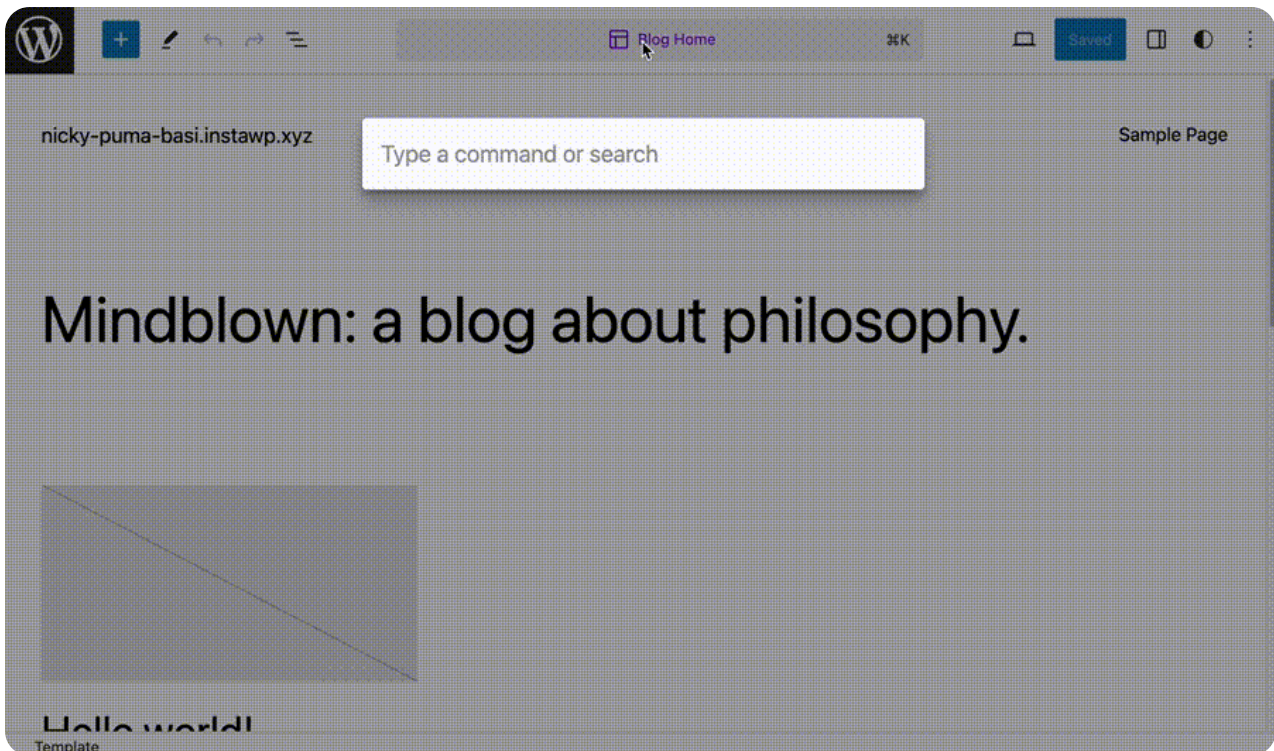

The GitHub command palette

Did you know WordPress has a command palette?

No neither did I until researching this blog post!

You can learn more about the [WordPress Command Palette](#) on the official [learn.wordpress.org website](https://learn.wordpress.org).

To access the WordPress Command Palette, simply open the Site Editor or a page or a post and use the keyboard shortcut command K on Mac or control K on Windows. You can also find it in the sidebar of the site view by clicking on the Search icon or the title bar of a template or page. Once you open the Command Palette, you will see a list of available commands.

What other keyboard shortcuts does mySites.guru have?

if you press the question mark on your keyboard (shift / on my mac) then you will get to the [Keyboard Shortcuts page](#) describing other keyboard shortcuts you can use from anywhere.

These include some of the most commonly used tools such as:

- the [Mass Remote Installation Of Plugins](#) (keyboard shortcut: m i)
- the [Mass Update WordPress/Joomla Sites Tool](#) (keyboard shortcut: m u)
- the [Available Upgrades & Extension/Plugin Updates](#) (keyboard shortcut: u)

You can even toggle dark mode from anywhere simply by pressing d

Want to quickly logout? Press shift l (thats basically a capital L to logout)

Want to get back to your list of sites? (s) or just view WordPress Sites (w)

So many [more keyboard shortcuts](#) are available in your mySites.guru account.
