Universal User Management Across Sites

Search, edit, and reset passwords for users across all your Joomla and WordPress sites from one page. Manage roles, revoke access, and save hours.

Phil E. Taylor | 12 March 2026

mySites.guru lets you manage all your users, across all your sites, from a single page. Change email addresses, reset passwords, assign roles and permissions, block accounts. No logging into each site individually.

This is part of the mySites.guru dashboard, which covers unlimited Joomla, WordPress, and PHP sites for £19.99 per month.

The idea behind Universal User Management

Password resets without the runaround

Your client calls to say they've forgotten their password. Before mySites.guru, you'd have to go to their website, remember your own credentials, log in, find their user account, reset the password, and relay the new one back to them.

With Universal User Management, you can:

- Go to Universal User Management (find it in the left menu, or press Shift twice to open the command palette)
- Search by name or email address
- Click edit next to their user account
- Change the password
- Save – done

Step 1: Search

Step 1: Search for users

Part of a Username, Name or Email Address:

Thunder

Search

Step 2: Select one or more user accounts found across your sites, or click edit to update a specific user

Step 2: Select one or more users to manipulate from the search results returned from 82 sites...

Choose a new PASSWORD, or leave this box empty to NOT change the password

>

Choose one or more roles for this user

> Administrator
> Author
> Editor
> Guest
> Manager
> Public
> Publisher
> Registered
> Super Users

Save changes back to your sites

💡 That's it - password reset done in seconds, not minutes.

Your request is being processed to the selected sites, check the action column for the status

Site	Action
My Important Website	✅ Success!

Start A New Search

Revoking access for a departing team member

A staff member leaves your agency, maybe on bad terms, and you need to find every client site they have access to. Search their name or email address and you get back a list of every site where they have an account. Reset the password or block them across all of those sites at once.

Bulk name changes

A user gets married and wants their new surname updated across all their accounts. Universal User Management handles that across hundreds of sites in one go.

Role and permission changes

Need to change someone from editor to administrator across all their sites? Search, edit, save. Same process works in reverse if you need to downgrade permissions.

Searching for suspicious accounts

Investigating a compromised account? Search all users on all sites by name, email address, or email domain to track down suspicious or unauthorized accounts.

Got a different use case?

There are plenty more situations where searching and editing users across sites comes in handy. If you've got one we haven't thought of, let us know.

The full list of features

- Search users across all connected sites by name or email

- Edit email addresses, passwords, names, and roles

- Log in as any user on any site using mySites.guru AutoLogin

On the roadmap

- Block a user across sites (WordPress has no built-in concept of blocking, so this needs custom handling)

- Remove two-factor authentication from a Joomla user

- Retrieve 2FA backup codes from a Joomla user so you can give your client a one-time login to re-enable it

Managing your team's access to mySites.guru itself is handled separately through the team management feature.

Frequently Asked Questions

What is Universal User Management in mySites.guru?

A single interface that lets you search, edit, reset passwords, and change roles for users across all your connected Joomla and WordPress sites without logging into each one individually.

Can I revoke a former employee's access across all client sites at once?

Yes. Search by name or email address to find every site that user has an account on, then reset their password or block them across all those sites in one step.

What user changes can I make through Universal User Management?

You can change email addresses, passwords, names, and roles or permissions. Blocking users and two-factor authentication management are on the roadmap.

Does Universal User Management work with both Joomla and WordPress?

Yes. It works across all your connected Joomla and WordPress sites from one search interface, regardless of CMS type.
